Dear Hiring Manager,

I am applying for the Principal Robotics Software Engineer role at Acme Robotics. Your posting asks for someone who can write motor-control firmware and also make the team around it faster, and that has been my work for the past few years.

At Northbridge Robotics I wrote motor-control firmware for a fleet of 1,400 warehouse robots, then built the hardware-in-the-loop bench that runs 212 automated tests on every merge. More recently I built a coding-agent workflow with Claude Code and measured it in a pilot of 8 engineers over 6 weeks, where median review time fell about 25%.

Your posting also lists safety certification as a plus, and I have not worked under ISO 26262, so that is where I would need to learn the most.

I would welcome a conversation about the role.

Sincerely,

Alex Rivera
