Dear Hiring Manager,

I am applying for the Principal Engineer, AI Developer Tools role at Stark Dynamics. You want someone to design a coding-agent workflow, the checks that review it, and the evaluation that shows whether it helps. I have built all three for a firmware team.

At Northbridge Robotics I built an internal coding-agent workflow with Claude Code, reviewed by automated gates, that delivered 180 tasks. I measured it in a pilot of 8 engineers over 6 weeks, where median review time fell about 25%, and wrote an LLM evaluation harness in Python that I ran against 300 past pull requests. The pilot was small, so I would want to measure it again at your scale.

I would welcome a conversation about the role.

Sincerely,

Alex Rivera
